About This Software

Take command of your games with your voice using VoiceBot! Sending commands to your games and applications is as easy as saying the command out loud. Use your voice to run keyboard shortcuts, click and move your mouse, and even execute complicated macros and scripts.

Advanced Voice Control

Take control over your favourite games with VoiceBot's advanced voice recognition. Bind voice commands to in-game actions and perform simple or complex actions with a single word.

Full VR Compatibility

Fully compatible with your favourite VR headsets, including the Oculus Rift. Take your VR gaming to the next level of immersion!

Ready-to-Use Game Profiles

Packed with hundreds of premade game profiles ready for you to use. Old games, new games, indie games and big-budget games, VoiceBot has you covered!

Scriptable Game Macros

Create custom game macros to bind to voice commands. Use our simple editor to create basic sequences, or code your own complex scripted macros using the built-in C# code editor. The only limit is your imagination!

Sync Between Computers

Sign-in to your Binary Fortress account and sync your game profiles between your computers automatically.

Share with the Community

Create and share your own custom game profiles with the VoiceBot community. Have a favourite game that doesn't have a profile? Set one up and we'll help you share it with the incredible VoiceBot community so everyone can enjoy it!

Global Macros

Global Macros provide always-on commands, even when a profile is loaded. Commands like 'close window', 'volume up', 'mute', 'lock desktop' and many more. Use the built-in Global Macros or create your own for full control.

I have one MAJOR complaint about this software.

I play flight sims and other games where my main interface is NOT the keyboard. I need to be able to assign "hot keys" from other sources besides my keyboard.

What I need is to be able to assign a hot key to my flight stick or throttle (HOTAS) or race wheel instead of the keyboard so I can access voice commands easier.

I cannot recommend this software for any game where the keyboard is not your main interface.

I will update this if and when they implement hot keys on other devices besides the keyboard.. The voice recognition is garbage for me its 1\/10 words that are correctly. The only thing I use this for is to play the T Mobile sound in Teamspeak when I complain about my Internet connection. Interface and options are very good and everything works perfectly, except the voice recognition.
